Acute behavioral disturbance is becoming increasingly common presentation in children and young people presenting to primary care providers and hospitals. It's even more challenging if the child has developmental delay, complex family dynamics and associated medical /genetic co morbidities.

You are invited to join our online presentation focusing on the acute behavioral disturbance in children , treatment options and accessing available services.

Learning Outcomes:

1. Improved knowledge of acute behavioral disturbance in children in community and hospital settings.
2. Strategies to respond including acute management in ED
3. Information about available resources and health pathways
