Emerging technologies such as automated decision-making (ADM) and artificial intelligence (AI) are being increasingly applied within healthcare contexts. However, media coverage tends to focus on overseas examples. What is happening here in Australia? What technologies actually exist, and what does AI look like in practice? What are the opportunities and impacts for health consumers?

In this webinar, researchers, Dr Ash Watson and Vaughan Wozniak-O'Connor, will answer these questions and share their findings. They will be joined by Steve Woodyatt, CEO at Datarwe, a digital health technology company and Roma Cecere, consumer advocate, who will respond and share their experiences in this developing space.
