Learning Outcomes

On completion of this activity participants will be able to...

- 1. Identify and apply the steps that need to be taken in the event of a cardiac arrest patient in the general practice setting.*
- 2. Recall the appropriate methods and processes of gaining emergency assistance in the general practice setting, in the event of a cardiac arrest.*
- 3. Manage a suspected cardiac arrest including the demonstration of BLS-CPR procedures, including the delivery of effective ventilations and compressions and use of an AED on all age groups using anatomically appropriate resuscitation manikins.*

Implement strategies in the practice to reduce the emotional impact of an emergency on individuals and the team.
