The meaningful use of digital health in Australia is underpinned by healthcare organisations connecting to the Healthcare Identifiers service. This four-part webinar series will provide managers of medical practices, community pharmacies and other healthcare organisations with an understanding of the foundations of digital health and how to put in place the pre-requisites required to connect to digital health services (such as electronic prescriptions, My Health Record and secure messaging). This session, 'Setting up access to My Health Record and electronic prescriptions', is the fourth in the series and will cover the steps required to set up an organisation for My Health Record and electronic prescribing after registration with the HI service has been completed. The session will cover NASH certificates, CSP linking, system configuration and electronic prescribing requirements.
