Presented by Dr Sergio Diez Alvarez

COPD

Identify signs and symptoms that indicate a need to adjust pharmacotherapy in moderate COPD

Determine appropriate strategies to provide early optimisation of therapy in patients with moderate COPD

Examine the clinical evidence behind pharmacological strategies for the reduction of exacerbation risk in patients with moderate COPD

ASTHMA

Clinical benefits of regular maintenance therapy versus intermittent treatment

Comparing efficacy and safety of commonly used ICS

Importance of adherence and device technique in asthma

Importance of discussing sub-optimal asthma control with your patients
