

HIV Update on Shared Care for Chronic Disease Management

WHEN Wednesday, December 1st 2021
7:00 PM – 9:00 PM

WHERE Online

COST Free

People living with HIV can expect to live long and productive lives and HIV infection can be managed using a team-based interdisciplinary 'shared care' approach involving GPs, specialists, nurses, allied health and specialist support services. This shift to a chronic disease model means there is an increasingly important role for GPs and primary health care nurses to ensure that patients are offered comprehensive preventative care based on national guidelines. This online webinar will be presented on World AIDS Day by Dr Carole Khaw.
