In this one hour live event, our panel of clinical experts will discuss the latest evidence and clinical recommendations outlined in Investigating symptoms of lung cancer: a guide for all health professionals. The role of primary care health professionals as active initiators of the lung cancer diagnostic pathway and supporting patients throughout their journey will also be discussed.

Event attendees will receive early access to an accredited, scenario-based eLearning package entitled A Systematic Approach to Investigating Symptoms of Lung Cancer, developed by Lung Foundation Australia in partnership with Cancer Australia.
