This course will provide essential and advanced knowledge in the field of male infertility and its management, focussing on its prevalence and causes. Conventional semen parameters will be discussed in context with the World Health Organisation (WHO) guidelines. The online sessions will be facilitated by practicing clinicians from a range of disciplines including, andrologists, endocrinologists, embryologists, reproductive scientists, general practitioners, and others presenting contemporary clinical evidence-based practice recommendations with Q&A. The afternoon will consist of interactive case discussions including the implementation of treatment strategies for male infertility patients based on clinical characteristics and semen parameters. Extra resources will be provided.
