Our aim is to raise awareness of the importance of vaccination and increase vaccination knowledge and confidence through community workshops and online webinars.

The Hunter New England Public Health team will share the latest updates about influenza, COVID and other viruses, including information to help keep mob safe.

We will talk about the recommended vaccinations for babies, children, teenagers, adults, pregnant people and Elders.

We will share ways to have supportive conversations with people who may be hesitant or reluctant to get vaccinated.

You will have the opportunity to talk to vaccine and public health experts about concerns or questions you may have about vaccination.
