Join our Chair, Professor Garry Jennings, and an expert panel as we showcase the new Australian CVD risk guideline and calculator in clinical practice.

The new 2023 Australian Guideline for assessing and managing cardiovascular disease (CVD) risk and risk calculator provide the latest evidence, practical advice and tools for CVD risk assessment and management in primary care.

Prediction in practice will illustrate how to effectively use the Aus CVD Risk Calculator in primary care through case-based demonstrations of new features such as reclassification factors and risk communication tools. One hour of live, case-based presentations will be followed by an extended 30-minute live audience Q&A with opportunities to pre-submit questions.
