

PRIME TIME IN T2D: are GPs ready for GLP-1s?

WHEN Tuesday, March 30th 2021
7:00 PM – 8:30 PM

WHERE Online

COST Free

Is there a case to be made for the use of GLP-1 receptor agonists (RAs) as second line therapy in patients who have failed to achieve HbA1c control with Metformin? In this online masterclass, a panel of diabetes experts will tackle this question, including discussions of glycaemic control, renal considerations, the barriers to using GLP-1 RAs second line, a case study example, and a panel discussion of how to practically implement best practice guidelines in a primary care setting.

This masterclass will be hosted by:

Prof Merlin Thomas, Director of the Biochemistry of Diabetes Complications Laboratory, Department of Diabetes, Monash University, VIC; Dr Ted Wu, Director of the Diabetes Centre, The Royal Prince Alfred Hospital, NSW; A/Prof Ralph Audehm, General Practitioner, Carlton Family Medical Practice and Honorary Clinical Associate Professor, Department of General Practice, The University of Melbourne, VIC.
