Learning Outcomes

On completion of this activity participants will be able to

- Identify and apply the steps that need to be taken in the event of a cardiac arrest patient in the general practice setting.
- Recall the appropriate methods and processes of gaining emergency assistance in the general practice setting, in the event of a cardiac arrest.
- Manage a suspected cardiac arrest including the demonstration of BLS-CPR procedures, including the delivery of effective ventilations and compressions and use of an AED on all age groups using anatomically appropriate resuscitation manikins.
- Implement strategies in the practice to reduce the emotional impact of an emergency on individuals and the team.
