This GP-led ALM, supported by diabetes specialists, will provide practical guidance on the role and implementation of insulin in the contemporary management of diabetes in the primary care space.

Learning outcomes:

Rationalise the use of insulin in the current T2D management landscape, using latest guidelines

Evaluate the role of newer, second-generation analogue insulins when individualising patient treatment

Implement simple models and tools to optimise insulin delivery

Conduct an effective patient consult when initiating, intensifying or switching insulins

Assess and consider the use of rapidly evolving technology in T2D management
