

# Webinar: Emerging vaccine preventable diseases and vaccination for travel

**WHEN** Thursday, September 1st 2022  
12:30 PM - 2:00 PM

**WHERE** Online

**COST** Free

As we continue to navigate life with COVID-19, we are seeing a rapid return of international movements of people and pathogens. In this next NCIRS webinar, we will discuss and provide updates on the prevention and control of vaccine preventable diseases in the context of this increase in international travel. Topics covered will include: • the latest on emerging and re-emerging vaccine preventable disease risks, including COVID-19 variants, diphtheria, measles, monkeypox, Japanese encephalitis and more • current global vaccine preventable disease issues and prevention and control measures • an update on travel vaccination recommendations and pre-travel consultations with a healthcare provider. A recording of this webinar will be made available to registrants following the session.
